Micropack has been involved in the oil & gas industry for over 20 years. Throughout this time Micropack has become recognised as being experts in hazard detection technologies.

In the early eighties Micropack were involved in offshore process control and safety systems. This encompassed development, commissioning and support services to major clients and installations such as the Chevron Ninian field. Later, in the late eighties, Micropack innovated in the field of [optical fire and gas detection](#).

[Visual Flame
Detection](#)

As a result Micropack has been involved in the development of many of the leading detection equipment on the market today. During this period Micropack became involved in fire research work and the effects of offshore environmental conditions on optical detection methods.

This led to Micropack developing a range of mapping tools to measure the performance of fire and gas detection systems. More recently Micropack has begun to apply its unique expertise and technology in its own range of products, including the CCTV Fire Detection System.

The CCTV Fire Detection System has been successfully installed and operated on a number of installations for over 5 years.
